

Passenger counts showed no significant difference by gender, but varied significantly by age

In addition to age, significant differences emerged across customer types and purposes of travel. Specifically, loyal customers outnumbered new ones, and the majority of passengers chose our airline for business travel.

Age of Passenger

Business class customer more satisfied than the other classes.

We found a key insight here that warrants highlighting. While the previous slide showed that the majority of our customers travel for business, **this trend is strictly limited to Business and Eco Plus classes.** In Economy class, the pattern reverses: passengers predominantly travel for personal reasons, with the majority being under 15 or over 64 years old.

Passenger by Class and Gate location

Delay made the passengers not satisfied.

A departure or arrival delay of **just 12 minutes** triggers a significant drop in customer satisfaction. Interestingly, business travelers maintain a higher satisfaction rate than personal travelers. This gap is largely driven by demographics: the personal travel segment is dominated by younger passengers under 15 and seniors over 64, who may be more sensitive to delays
